Appendix A: Group Workshop formats

1. Introduction

The ResilienceBuilder Group Workshop Facilitator Guide is strictly only for use by Certified ResilienceBuilder coaches and facilitators.

The guide should be used in conjunction with the ResilienceBuilder Group Workshop slides and the ResilienceBuilder Assessment Reports.

2. Group Workshop Formats

When delivering the ResilienceBuilder Group Workshop to your clients, there are multiple formats that you may want to consider ranging from a ½ day virtual session to a 2-day face to face workshop. You may also want to incorporate the ResilienceBuilder Group workshop within an existing workshop format that you are already delivering e.g. High Performing Teams.

Sample group workshop agendas for each format are provided in Appendix A of this guide, based on the following;

- ½ day virtual/face to face group workshop
- 1 day virtual/face to face group workshop
- 2-day face to face group workshop

The main difference between the different formats is the amount of time available for discussion and exercises within the group.

A ResilienceBuilder workshop also works well as part of a 'high performing team' workshop or leadership development programme or workshop.

3. Group Workshop Preparation

This section outlines the activities required prior to delivering the ResilienceBuilder Group workshop.

3-4 weeks before the Group workshop

Request the list of names and email addresses of the workshop attendees from your client.

2 weeks before the Group Workshop

Send out an email to all workshop attendees requesting completion of the ResilienceBuilder Assessment Tool together with the link and completion instructions. Sample email completion instructions are provided below;

*In preparation for the Resilience workshop on **insert date**, please complete the ResilienceBuilder Assessment Tool (see link below) which should take no more than 5-10 minutes to complete. Please complete this by close of business on **insert date**.*

<https://xxx.yyyy.zz>

During the workshop we will explore the topic of resilience, stress and burnout, and characteristics of highly resilient people. We will also explore some of the common areas for development across the team. Following the workshop, each of you will receive a personalised report outlining your current level of resilience with some recommended areas for further personal development. Your reports will be confidential to you so please answer the Assessment as openly and as honestly as possible to get the most benefit out of it.

1 week before the Group Workshop

Send out a reminder email to everyone who has not yet completed the ResilienceBuilder Assessment tool. Ask the group/team leader to support the process by sending out their own reminder to those who have not yet completed the Assessment Tool.

Workshop Preparation

Prior to the workshop itself, and once all of the attendees have completed the Assessment Tool, the following activities on the checklist below need to be completed:

Pre-workshop Checklist

1. Download the Personalised Reports for the workshop attendees.
2. Review the ResilienceBuilder Group analytics showing the most common strengths and the most common development areas across the team.
3. Update the facet and sub-facet slides aligned to point 2 above.
4. Finalise the presentation material, selecting the appropriate slides from the ResilienceBuilder Group Workshop slide deck.
5. Identify in advance some of the potential areas to work through as a group during the workshop

Post Workshop follow up actions

Following the workshop, please complete the following checklist;

Post-Workshop Checklist

1. Email all attendees their personalised reports.
2. Email the group leader the ResilienceBuilder slide deck used in the workshop in PDF format together with any group analytics and Mentimeter output.
3. Send out a brief questionnaire to all attendees requesting feedback following the workshop
4. Send out a follow up email to all attendees encouraging them to action one/two of the recommended areas for development in their report.
5. Offer a 30 minute debrief session with the group leader to agree next steps and potentially to position follow on group or individual coaching.

4. Group Workshop Agenda and Flow

Outlined below is a typical workshop agenda and flow. The amount of time allocated to each of the areas will be related to the overall time available for the workshop. The longer the time available, the more opportunity there will be for group exercises and actions. (See section 2; Group Workshop Formats).

ResilienceBuilder Group Workshop Agenda (Sample)

- Introductions
- Workshop Objectives & Desired Outcomes
- What is Resilience?
- Building Resilience
- Why it's Important
- Characteristics of highly resilient people
- The ResilienceBuilder Model
- ResilienceBuilder Assessment Tool
- Changing Habits
- Call to Action - Individuals
- Reviewing the Group results
- Deep dive on x sub-facets
- Team Actions
- Summary and Close

5. Group Workshop Objectives

When kicking off the ResilienceBuilder Group Workshop, it is important to outline the objectives of the workshop to set expectations across the group.

The key objectives are as follows;

- Raise the level of awareness on the topic of stress, burnout and resilience by discussing it openly with the group/team.
- Building trust in a safe environment.
- Provide a common understanding of the importance of resilience and the characteristics of highly resilient people.
- Understand the level of stress and burnout across the team and the key drivers.
- Understand the common strengths and challenges across the team when building resilience.
- Identify at a team level, one or more common areas to work on together to improve resilience.
- At an individual level, gain commitment to working on developing one or more recommendations from their personalised resilience report.

You may also wish to ask the team when they introduce themselves to ask what they want to get from the workshop.

6. Group Workshop Outcomes

The key desired outcomes from the workshop are as follows;

- All individuals will have a clear indication of their current level of resilience together with some recommended areas for further development.
- The Group/team will have a common understanding of the common strengths and challenges across the group in terms of resilience.
- Each individual will commit to working on at least one development area to build their resilience.
- The Group will commit to working on at least one common challenge area to help them become more resilient collectively.
- Overall, the desired outcome is for the team to become more resilient individually and collectively and therefore be better equipped to cope with adversity, stress and challenges more effectively.

7. Workshop Content Delivery

Use this guide in conjunction with the 'Group Workshop Slides Final'

Introduction

As part of your introduction, we recommend that you set the scene for the workshop as follows;

- Brief thank you from the Group/Team Leader to attendees for joining the workshop
- Brief personal introduction from yourself (avoid a long step by step CV!). Explain why this topic is important to you? Perhaps a personal story related to the topic.
- Outline the workshop objectives/desired outcomes
- Share the agenda and approximate timings for lunch, coffee etc
- Remind everyone of the housekeeping rules;
 - Turn laptops and phones off, you won't need them
 - There will be regular breaks with time to make calls and catch up on emails
 - Be prompt when coming back after the break.
- Give guidance on how to get the most out of the session as follows;
 - Confirm to everyone that this is a big investment in terms of time and money by their organisation and as a result they should seize the opportunity.
 - Confirm that everything that is discussed in the workshop is confidential and for the benefit of this team and that all reports are confidential to the individual and not shared.
 - Stress that this is a safe environment where everyone is encouraged to speak openly without fear of criticism or ridicule.
 - With this in mind, encourage everyone to take a step out of their comfort zone and share their thoughts.
 - Signal to the group that everyone has a voice and encourage the quieter ones to speak up, and the louder ones to make space for everyone to give their point of view.

Slide: Workshop Objectives

Question: What are you looking to get from the workshop (roundtable).

Record answers on whiteboard or slide.

Slide: Workshop Outcomes

Note: You may wish to either use the workshop objectives or the workshop outcomes slide rather than both.

Slide; What is Resilience?

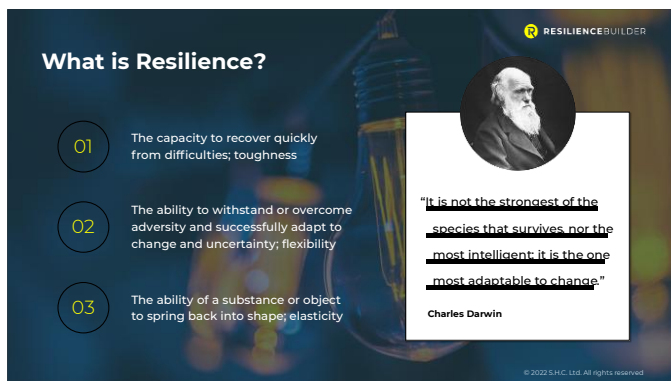

Question: Ask the group to define 'resilience'.

Write their answers on a whiteboard or flipchart or if virtual, on a slide.

Make sure you get a variety of inputs from across the group.

Question (optional); Ask them to think of something or someone that epitomises resilience.

Reveal: Now reveal the rest of the slide which are some typical definitions of resilience including the scientific definition (last one).

Slide: Building Resilience

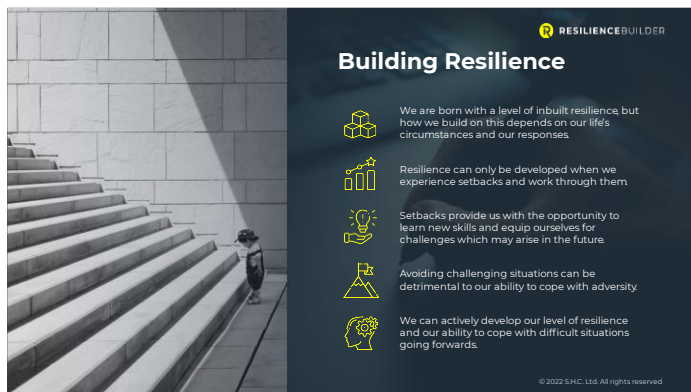

Question: Ask the group whether we are resilient when we are born?

Question: How is resilience developed further?

Reveal the rest of the slide showing that we are born with a level of resilience. And that resilience can only be built when we experience setbacks and challenges

Comment: When we avoid difficult situations, we miss the opportunity to learn and the ability to cope with future adversity.

Comment: Offer the analogy of the parent who wraps their child in 'cotton wool' to protect them from the outside world. By doing this they are likely to be impacting the child's ability to cope with adversity later on in life.

Slide: Why is Resilience Important?

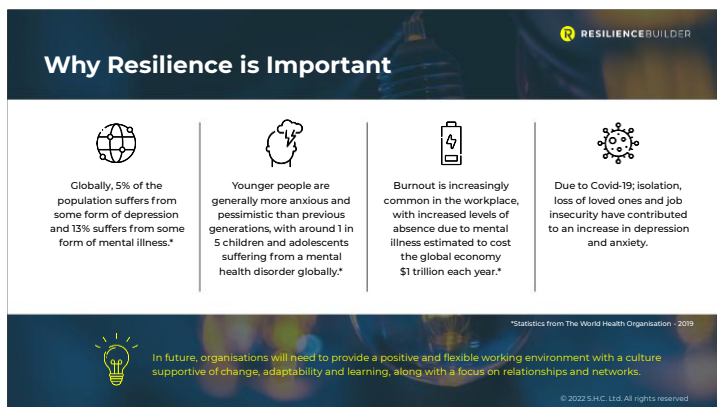

Question; Why is Resilience Important?

Ask the group for a variety of perspectives on why resilience is important in today's world.

Reveal; Here are 4 key areas that make resilience so important today.

- Increase in mental health issues globally
- Increase in stress and anxiety among younger generations
- Impact of stress and burnout in the workplace
- Impact of covid-19 pandemic and global challenges – economic, conflict, climate etc

Discuss a couple of the areas and get people's perspectives

Explain: We need to help individuals and teams become more resilient and better able to cope with the increasing level of change, adversity and stress in the workplace.

So, let's think about what makes a person resilient?

Slide: What do you think are the key characteristics of a highly resilient person? (Blank)

Question: What do you think are characteristics of a highly resilient person?

Write them on a whiteboard or add to the blank slide

Slide: What makes a Person Resilient?

Begin by talking about the extensive research that went into identifying the most common characteristics of highly resilient people. Academic research, including a detailed understanding of the 'resilience scales' that are already out there, together with personal experience of the founder over 30 years of senior leadership.

Summarise the finding as below on the slide. E.g.

'Highly resilient people tend to be positive, highly adaptable to change and never give up and are able to manage stress effectively.

They tend to have a clear purpose and direction and goals to help them get there.

Healthy eating, regular exercise and a good work/life balance are also correlated with highly resilient people.

Resilient people tend to be self-aware, with high levels of self-esteem and are able to manage their emotions.

They also have a strong network of family, friends and colleagues and a coach/mentor to support them on their journey.

What Makes a Person Resilient

What do you think are the key characteristics of a highly resilient person?

According to various resilience scales and research, the most common characteristics possessed by highly resilient people are:

-  Optimism, adaptability and persistence, with the ability to manage stress effectively.
-  A sense of purpose and meaning to their lives, with clear goals aligned to their personal values.
-  Taking care of themselves through healthy eating, regular exercise, restful sleep and a good work/life balance.
-  High levels of self-awareness, self-efficacy and self-esteem, with the ability to manage their emotions.
-  A highly supportive network of family, friends and colleagues – people they can trust and confide in when things get tough.

Slide: The ResilienceBuilder Model

The ResilienceBuilder model aims to synthesize the vast amount of research that has been done on the topic of resilience into a simple but powerful model. The model identifies 5 key areas of resilience; mental strength, purpose, physical stamina, emotional intelligence and social support.

Slide: Building Resilience Flow

It all starts with the Online ResilienceBuilder Assessment Tool, accessible via a mobile phone or laptop. There are approximately 49 questions whereby the respondent is asked to select one of five options; Strongly Agree/Agree/Neutral/Disagree/Strongly Disagree.

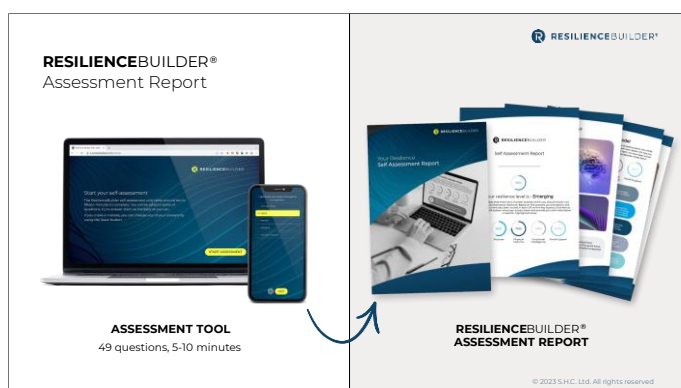

Once completed, a personalised report is generated and sent to the respondent. This may be done before the workshop itself or straight after the workshop has finished.

I generally send them out following the workshop to ensure that people are focused on the discussion rather than reading their own report, but you may want to try different formats depending on the duration of the workshop.

Tip: Emphasise that the personalised report is confidential to the individual and will not be shared with anyone else.

Explain that the data is then anonymised for use in the group workshop to identify challenges that are common to the team.

Slide: ResilienceBuilder Assessment Report

Explain to the group how the ResilienceBuilder Assessment report works by guiding them through the report as follows;

Page 2 of the report (see above image) provides the respondent with their overall level of Resilience, expressed as a % and labelled as either **Strong/Growing/Emerging**.

Beneath that are the 5 facets; Mental Strength/Purpose/Physical Stamina/Emotional Intelligence/Social Support with a % score for each area.

Note: The main purpose of the % scores are to provide a relative view of each facet when compared to another. In this way the respondent can quickly see which facets are the strongest and which may require further development.

Page 3 of the report provides an explanation of the levels of Resilience; Strong/Growing/Emerging.

Slide: Resilience Assessment report – Facet and sub-facet details

Now explain how the report provides details and recommendations for each of the facet areas; Mental Strength/Purpose/Physical Stamina/Emotional Intelligence/Social Support.

On the left-hand side of the report, you can see the page relating to Mental Strength. Here you can see that there are two recommendations for development within Mental Strength for the respondent; Adapting to Change and Positivity and Optimism.

Each recommendation is explained and a tip is given to help people get started on their development journey.

The idea behind this is to help people identify potential areas for building resilience and to encourage them to take the next step in terms of self-learning or 1:1 coaching.

Note: The recommendations provided in the personalised assessment report are based on the answers given in the Assessment tool by the respondent. These are purely recommendations and it may be the case that the respondent does not recognise that they need further development in a specific area.

In a 1:1 coaching session (or via email when I send out the report) I usually begin by asking if the recommendations resonated with the individual. In that way we can identify any areas that may not need further development or discussion and enable them to focus on the key areas.

Facets and Sub Facets

Within each of the 5 facets of resilience; Mental Strength/Purpose/Physical Stamina/Emotional Intelligence/Social Support, there are sub-facets or recommendations that can be triggered according to the responses given in the Assessment tool.

In total there are 30 recommendations/sub-facets that may be triggered in the personalised Assessment report.

Slide: Mental Strength sub-facets/potential recommendations

The 10 sub-facets/potential recommendations within Mental Strength are as follows:

- Prioritisation
- Avoiding Procrastination
- Perseverance
- Positivity and Optimism
- Managing Perfectionism
- Self-confidence
- Keeping things in perspective
- Adapting to change
- Focus on things you can control
- Self-efficacy

Slide: Purpose sub-facets/potential recommendations

The 4 sub-facets/potential recommendations within Purpose are as follows:

- Having a clear life direction
- Identifying clear goals
- Leveraging your strengths
- Understanding your core values

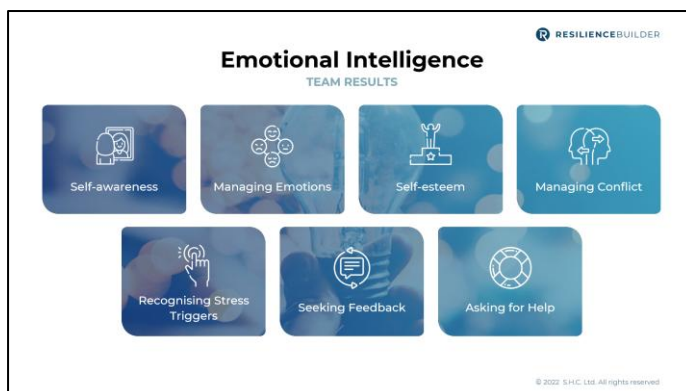

Slide: Physical Stamina sub-facets/potential recommendations

The 6 sub-facets/potential recommendations within Physical Stamina are as follows:

- A healthy and balanced diet
- Regular exercise
- Quality sleep
- Separating work from home
- Work/Life balance
- Ability to relax and recharge

Slide: Emotional Intelligence sub-facets/potential recommendations

The 7 sub-facets/potential recommendations within Emotional Intelligence are as follows:

- Self-awareness
- Managing emotions
- Self-esteem
- Managing conflict
- Recognising stress triggers
- Seeking feedback
- Asking for help

Slide: Social Network sub-facets/potential recommendations

The 3 sub-facets/potential recommendations within Social Support are as follows:

- An established support network
- People you can confide in
- A mentor/coach

Slide: Creating the Environment for People to Thrive

To help people build resilience enabling them to cope with stress and adversity and to avoid burnout we need to focus on 4 different levels;

- What can we do as an organisation to address the environmental/cultural issues that are impacting people and teams?
- What can we do as leaders?
- What can we do as a team to collectively become more resilient?
- What can we do individually to build our personal resilience?

This is where you need to make the connection between the issue of stress, burnout and performance as being the responsibility of the organisation, the team and the individual.

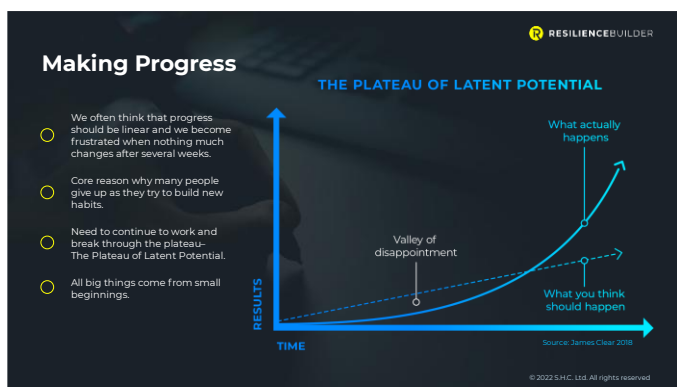

Slide: Changing Habits

Explain that when it comes to changing habits, we often think that we need to take massive action.

In reality a small change every day has a compound effect over time as you can see from this graph created by James Clear in his book Atomic Habits.

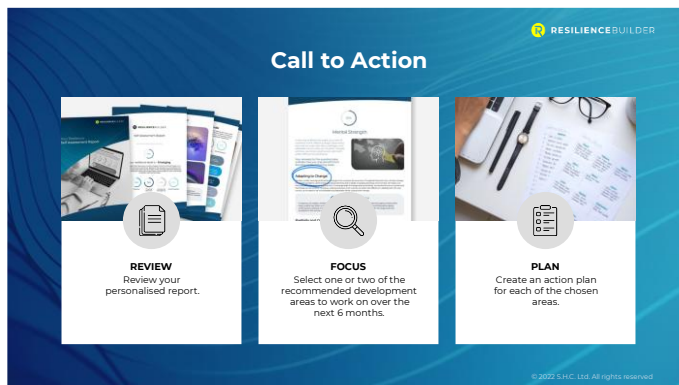

Slide: Making Progress

Explain: Changing habits isn't easy. We expect to see instant results and get frustrated when nothing appears to have changed shown above as 'the valley of disappointment'. We need to continue on beyond this plateau if we are to make lasting change to our habits.

Explain: Changing habits also requires a mindset change. Often, we train for an event e.g., a marathon and when we have completed the task we revert back to old habits. Instead, we need to think differently in terms of a mindset change. So instead of saying 'I want to run a marathon', we should instead say, 'I want to be an athlete', to affect a long-lasting change in habits.

Slide: Call to action individuals

Explain; ‘Following the workshop you will receive your personalised ResilienceBuilder report’ or where you sent the reports out in advance, ‘you have already received your personalised report.’ Now walk them through the call to action;

- **Review** your personalised report and understand the recommendations that have been made for developing your resilience.
- **Focus** by selecting 1 or 2 areas to work on over the next 6 months.
- **Plan** – build an action plan for each of the areas that you select to work on.
- **Seek help** – through 1:1 coaching or self-learning by using the detailed sub-facet materials.
- **Share your experiences** with friends and colleagues. What did you do differently? How did you create a new habit. What was the outcome?
- **Follow up** – In 6 -12 months do the Assessment tool again and review progress.

Slide: Personal Resilience Development Plan

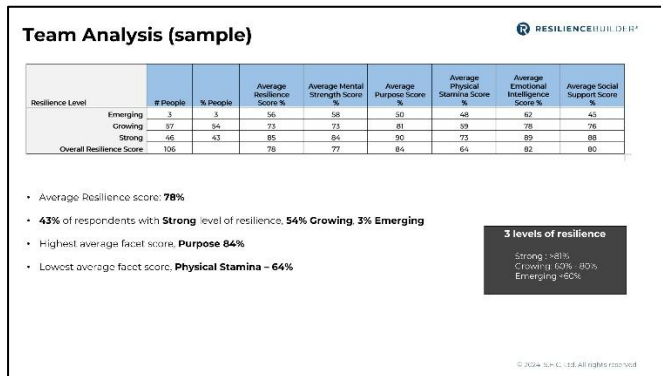

Reference the ResilienceBuilder Personal Development Plan at the back of the Assessment Report, also available digitally.

Data Insights from Group Results

The recommended approach is to begin by presenting the high-level results at a team/group level. Stress that the individual data has been anonymised and make sure that no one can be identified from the data in this section.

Explain the table below in terms of overall resilience level, % people in each level of resilience (Strong/Growing/Emerging), average facet % scores. Highlight strongest and weakest facet scores as a team.

Slide: Stress v Performance Curve

In the Assessment Tool are three questions relating to the Stress v Performance curve. Begin by explaining the graph as follows;

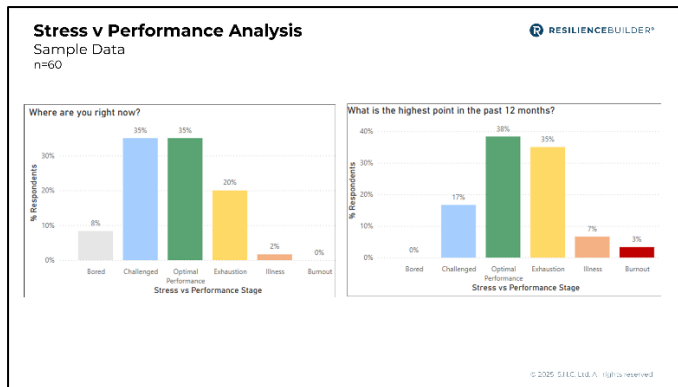

‘We are now going to look at the relationship between stress and performance. Performance is shown on the vertical axis, stress on the horizontal axis.

We all need a level of pressure and stress to reach our optimal level of performance as you can see in the middle zone of the graph. Without that we may become bored, although it is unlikely in today’s fast paced world!

But as the levels of stress and pressure increase and become consistent and constant, our performance is impacted and we move into the exhaustion phase. If this continues for an extended period it can lead to illness and short-term absence from work. But if this level of stress continues forward, it can lead to breakdown and burnout which is defined as an extended absence from work. ‘

Slide: Stress v Performance Results

Now present the results showing graphs side by side (example below);

Question: What observations would you like to make about the results relating to the first graph, ‘Where are you now?’

Note: Make an observation about the % of people in the ‘optimal performance zone’. From experience it’s typically less than 33% of the total team, so plenty of room for improvement in effectiveness.

Now share the results from the second question.

Question: What observations would you like to make about the results from the second question – the highest number you have been in the last 12 months?

Note: Make an observation about the % of the team in the ‘optimal performance zone’ and the % of people in the ‘harmful stress’ area of exhaustion/illness/breakdown.

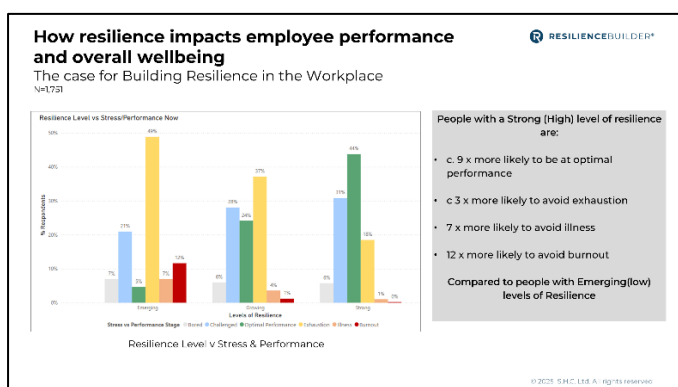

Ask if the team are surprised by this.

Slide (Add-in Optional) Feedback from other Teams on Stress v Performance results

Where you have run workshops for other teams in the same company, you may wish to share the collective results and compare them to this team to identify any key differences.

Slide: Combining Stress v Performance and Resilience Levels

If you combine the data from Stress v Performance and Resilience Levels, we can look at the inter-relationships between the two areas. For example, we can see below that people with Strong levels of resilience are 2 x more likely to be working at optimal performance and 3 times less likely to be suffering from exhaustion than those in the Growing level of resilience.

Presenting Group sub-facet Results

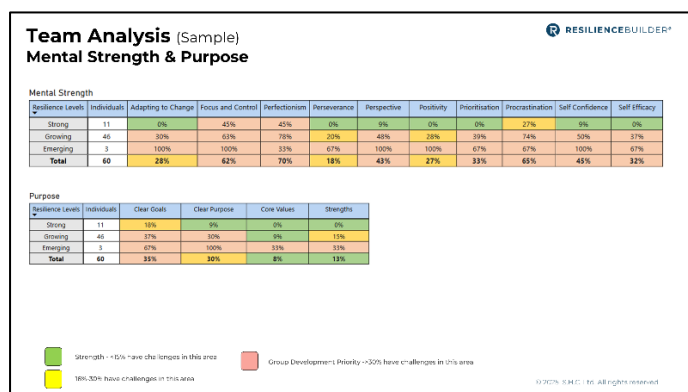

Prior to the workshop you will need to prepare the Group Results slide based on the group data analytics provided. For each of the facets: Mental Strength, Purpose, Physical Stamina, Emotional Intelligence, Social Support you will receive the data showing the following;

- The common strengths across the group/team
- The common challenges across the group team.

Each sub-facet is characterised as follows;

-  **85% or more** have these areas as **strengths**
-  **16%-30%** of people have **challenges** in these areas
-  **More than 30%** of people have **challenges** in these areas

For the specific group/team that you are working with, add the results to the Results slide for each of the facets in the format provided. An example is provided below.

Comment: Don't forget to emphasise that these are the collective group/team results and the Green sub-facets represent those sub facets where the majority of the team are Strong. The Red sub-facets represent where more than 30% of the team have potential challenges.

Walk through each of the facets in turn and drive a discussion to understand how the team feel about the results and potential root causes.

Question: what's driving the results in a particular sub-facet? Are there any major surprises? We will be asking them to choose a couple of areas to deep dive on later in the workshop.

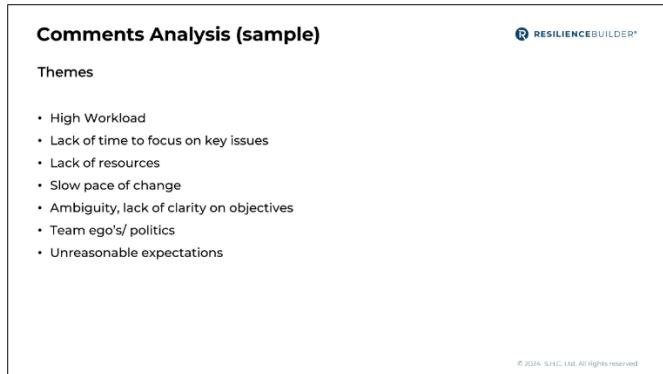

Question; Which areas could be most impactful for the Group/team if we could address them?

Point out that some areas may be inter-related for example; high levels of perfectionism may be impacting procrastination.

Repeat for Mental Strength, Purpose, Physical Stamina, Emotional Intelligence, Social Support

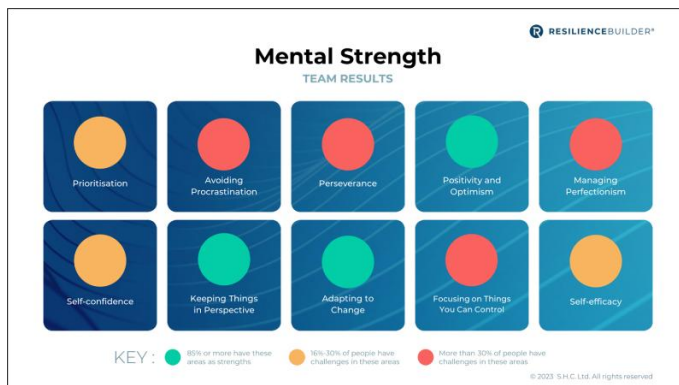

Record on a whiteboard some of the priority areas that the team identify as important as you go along. These will be areas that they may choose to work through during the workshop

Analyse and discuss the 'comments' as a group to begin to identify some of the key drivers

Alternative Approach to Presenting sub-facet Results

Alternatively, using the data analytics that you will receive, you may prefer to present a higher level of data which provides the audience with a visually impactful overview of common areas of strength and weakness. (see below).

Add animation so that the Strengths (Green) appear first, then the Yellows, then the Reds.

Slide: Summary of Focus Areas for Intervention

Prior to the workshop, you may wish to make a summary of the key areas that impacted; All levels of resilience. Growing and emerging levels. This will help determine which areas to focus on as part of the intervention.

Key Findings Focus Areas for Intervention					
Group	Mental Strength	Purpose	Physical Stamina	EQ	Social Support
All Resilience Levels	- Procrastination - Perfectionism - Focus on things you can control	-	- Time to relax and recharge - Work/life balance - Quality sleep	- Asking for help - Managing conflict	Mentor/Coach
Growing (addition)	- Prioritisation - Self-Efficacy - Self-Confidence - Keeping things in Perspective - Adapting to change	- Purpose - Clear Goals	- Exercise - Separating work from home	- Self Esteem - Feedback	Established Network
Emerging	N/A	N/A	N/A	N/A	N/A

© 2022 S.H.C. Ltd. All rights reserved

Selecting the Areas for the Group/Team Deep Dive

Having gone through the results for all 5 facets and their respective sub-facets, you now need to decide with the team, which areas to prioritise for a deeper dive discussion. The number of areas to select will depend on the amount of time you have allocated for the workshop overall. Typically, I would recommend the following;

½ day workshop 1 – 2 areas for deep dive

1 day workshop 3 areas to deep dive

2-day workshop 4 - 5 areas to deep dive

You can approach this in a number of ways;

- Give each group/team member x votes (x = # of areas for deep dive).
- Discuss with the group, which areas would be most impactful to the team's effectiveness and wellbeing if they could be addressed and prioritise.
- Select 1 area from each facet and prioritise (although we tend to see more challenges in Mental Strength and Physical Stamina from previous experience).

Deep Dive on Selected areas

Once the group/team have decided on the selected area(s), you will need to decide how to approach the Deep dive session. Depending on the number of people in the workshop, you may wish to adopt one of the following approaches;

- Everyone discusses the same focus area, together.
- Everyone discusses the same focus area, but split into 2 or more groups.
- The Group is split and each group is asked to address different focus areas.

Sub-Facet Materials

Sub-facet materials are available for all 30 ResilienceBuilder sub-facets and follow a similar structure:

- Group discussion on the specific area to have a common understanding of the problem statement and the impact on the group/team.
- Sharing best practice from the team and from the sub-facet materials.
- Group discussion to agree some practical approaches with clear actions that can be implemented across the team.
- Exercises for teams and individuals to follow.

Summary of Group/Team Actions

At the end of the workshop, make sure that the agreed group/team actions are summarised and owners agreed. Encourage the team to check in on a regular basis to measure the impact of the changes they have made as a team.

It can be powerful to approach it in the following way;

- 3 levels – Company/Group or Team/Individuals
 - Company – What support do we need from the broader organisation (feedback).
 - Group/team – What actions are we going to take collectively as a team?
 - Individuals – What actions am I going to take going forward?

8. Individual ResilienceBuilder Personal Development Plan

For one day and two-day workshops, I would recommend sending individuals their personalised assessment report at lunchtime for a 1-day workshop and at the end of day 1 for a 2-day workshop. You can then incorporate some time in the agenda for individuals to develop their own Personal Development Plan by selecting one or two areas to work on themselves.

Give everyone 30 minutes to decide which recommended area to work on and ask them to complete the relevant sections of the ResilienceBuilder Personal Development Plan for 1 area.

Then in pairs, in groups, or all together, depending on the size of the group/team, ask for volunteers to share their thinking in terms of;

- Which recommended area are they committing to work on.
- What is the current situation?
- What impact does that have on them and others?
- What specifically are they going to do differently?
- What help do they need?
- How will they measure success?
