

Your Resilience Assessment Report

Assessment Report

7B B

Your resilience level is - **Strong**

This score indicates that you already have a strong level of resilience and can cope with adversity and manage stress effectively. Based on the answers you provided using the assessment tool, you have also been scored in each of the five key aspects of resilience. This assessment will explain what your scores mean and provide you with information in specific, highlighted areas.

Mental
Strength

Purpose

Physical
Stamina

Emotional
Intelligence

Social Support

What is Resilience?

"It is not the strongest of the species that survives, nor the most intelligent; it is the one most adaptable to change."

- Charles Darwin

Throughout our lives we experience highs and lows on a daily basis, as well as more traumatic experiences which can have a more lasting impact – such as serious illness or the death of a family member. These changes affect people in different ways and bring with them a series of emotions and uncertainties which, in turn, govern our behaviour.

Resilience is defined as our ability to withstand or overcome adversity and successfully adapt to change and uncertainty. Examples of adversity may include serious illness, bereavement, an accident, stress at work or home, redundancy, financial problems or relationship issues. It is our capacity to recover quickly or 'bounce-back' from these difficulties and move forward positively that determines our resilience.

At birth we already have a degree of inbuilt resilience, but how we develop this further depends on life's circumstances and the way in which we respond. Ironically, we can only build our resilience when we experience setbacks and work through them. By learning new skills from previous challenges, we can be better prepared for what lies ahead and manage new or difficult situations more effectively.

Avoiding or running away from difficult situations, or being protected from problems, can be detrimental to our ability to cope with adversity. The good news is that we can actively develop our levels of resilience and thus be better prepared to manage difficult situations going forward.

Why Resilience is Important

Despite a general increase in the standard of living, statistics show that we are much less able to cope with the stresses of daily life. Globally, 5% of the population suffers from some form of depression and 13% suffer from some form of mental illness*

*Statistics from The World Health Organisation - 2019

Younger people are generally more anxious and pessimistic than previous generations, with long-term employment, social media and climate change among their most commonly reported concerns. Around 1 in 5 children and adolescents suffer from a mental health disorder globally (WHO 2019).

In the workplace, personal stress levels are increasing due to higher workloads, lower budgets, a rapidly evolving market and changes in skill requirements; including the need to keep up with developments in technology and social media. Burnout is increasingly common, with increased levels of absence due to mental illness estimated to cost the global economy US\$1 trillion in productivity each year (WHO 2019).

There has been a 13% rise in mental health conditions and substance use disorders in the last decade.

Around 20% of the world's children and adolescents have a mental health condition.

*Statistics from The World Health Organisation - 2019

Whilst the long-term impact of the Covid-19 pandemic on public health will not be clear for some time, emerging data shows that the new or intensified stressors associated with the pandemic – including isolation, increased rates of domestic abuse, experiencing the loss of a loved one and job insecurity – have contributed to an increase in cases of depression and anxiety. Today, the global economic situation, energy crisis, international conflict and the impact of climate change are all contributing to people's concern about the future.

In a business environment, organisations need individuals, teams and leaders who can survive and grow in the face of these challenges. Going forward, organisations will need to provide a positive and flexible working environment with a culture supportive of change, adaptability and learning, along with a focus on relationships and networks.

What Makes a Person Resilient

We are all born with a certain level of inbuilt resilience, but how we develop this depends on our environment and how we respond to challenging situations.

Extensive research has been made into resilience and the characteristics which define a resilient person. There are many facets to this research, and from these we have distilled the most common characteristics possessed by highly resilient people:

Common characteristics of highly resilient people

Optimism, adaptability and persistence, with the ability to manage stress effectively.

A sense of purpose and meaning to their lives, with clear goals aligned to their personal values.

Taking care of themselves through healthy eating, regular exercise, restful sleep and a good work/life balance.

High levels of self-awareness, self-efficacy and self-esteem, with the ability to manage their emotions.

A highly supportive network of family, friends and colleagues – people they can trust and confide in when things get tough.

Your overall resilience level is - **STRONG**

This score indicates that you already have a strong level of resilience and can cope with adversity and manage stress effectively.

How Your Resilience Score is Calculated

In order to actively develop resilience, it is important to firstly understand your current level, then identify what you can do to strengthen it further.

Your score is calculated using the answers you provided whilst using the assessment tool. It gives an indication of your current level of resilience.

To find out how you scored in each of the five aspects of resilience, take a look at the ResilienceBuilder Model and advice pages which follow. Based on the answers you provided, you will receive guidance in areas which have been highlighted as benefiting from further development.

STRONG

This score indicates that you already have a strong level of resilience and can cope with adversity and manage stress effectively.

GROWING

This score indicates that you have a solid foundation on which to build your level of resilience, with some areas needing development.

EMERGING

This score indicates that there are a number of areas which you should invest in to increase your level of personal resilience.

The ResilienceBuilder Model

Developed using analysis of resilience scales and extensive experience in leading teams, the model includes the essential building blocks of resilience. Understanding each aspect will help you interpret your scores as we explore areas for improvement. You have been scored in each of the five key aspects of resilience, according to the ResilienceBuilder Model below.

Mental Strength

Purpose

Physical Stamina

Emotional Intelligence

Social Support

RESILIENCEBUILDER MODEL

MENTAL STRENGTH

Mental strength determines how well we cope with daily challenges, how adaptable we are when our situation changes and how we remain positive and optimistic under difficult circumstances.

PURPOSE

Having a clear sense of purpose and defined goals – in our personal lives and at work – is a key factor when it comes to building resilience. Knowing what we are trying to achieve helps us to bounce back and stay on course following setbacks, enabling us to remain true to ourselves and our values.

PHYSICAL STAMINA

Good exercise, nutrition and restorative sleep are critical to improving resilience. It doesn't require becoming an athlete, it simply requires being conscious of the components our body and mind need in order to support a positive lifestyle.

EMOTIONAL INTELLIGENCE

High levels of Emotional Intelligence (EQ) enable us to recognise and manage our emotions, as well as the emotions of others. Emotions drive our behaviour and understanding how to manage them is crucial, particularly when dealing with pressure and stressful situations.

SOCIAL SUPPORT

Having a strong social support network of family, friends and colleagues is an essential aspect of resilience. When things get tough, having people you can confide in and turn to for support is vital, as is having a mentor to help you navigate through your journey.

Mental Strength

In the area of Mental Strength, your level of resilience is 80%. Mental strength determines how well we cope with daily challenges, how adaptable we are when our situation changes and how we remain positive and optimistic under difficult circumstances.

The outcome of the assessment tool indicates that you have a well-developed level of Mental Strength. Here you will find advice to help you maintain this level and develop it further:

When it comes to building mental strength, our ability to manage stress is a key factor. This can be improved with certain practices, including: prioritising tasks effectively, engaging with difficult tasks early, making decisions in a timely manner, avoiding perfectionism, keeping things in perspective and focusing on things which are in our control. Being flexible is also important – being adaptable and accepting of change enables us to look for opportunities which may arise as a result of that change.

People who score highly in this area are likely to have high levels of self-esteem and self-confidence – believing that they will succeed when faced with a new task. Positivity, optimism and hope are typical characteristics of people with good mental strength. They typically avoid negativity in themselves and others, and look for solutions instead of problems.

RESILIENCEBUILDER TIP

Being mentally strong can have its drawbacks. You may be unaware of potential sources of stress, because you are well equipped to cope with pressure. Situations can change rapidly and unforeseen external factors can increase pressure to levels you may not have previously experienced. For example, increased workload can impact our ability to prioritise effectively. Redundancy, a change of manager or a company re-organisation can knock our self-confidence. In these moments it is crucial that you can recognise when you are becoming overloaded or are close to burning out.

To improve your self-awareness, as well as your general resilience, aim to develop your mental strength further and employ the practices mentioned above. Get out of your comfort zone, take some risks, learn new skills and be prepared for whatever comes your way. We can only build our resilience by experiencing setbacks and learning from them.

Purpose

In the area of Purpose, your level of resilience is 80%. Having a clear sense of purpose and defined goals – in our personal lives and at work – is a key factor when it comes to building resilience. Knowing what we are trying to achieve helps us to bounce back and stay on course following setbacks, enabling us to remain true to ourselves and our values.

The outcome of the assessment tool indicates that you have a well-developed level of Purpose. Here you will find advice to help you maintain this level and develop it further:

Purpose can be in relation to life in general, e.g. 'I want to help others,' or it can be in relation to a specific career or personal goal. Some people will also have strong religious or spiritual beliefs which can give them a broader sense of meaning to their lives.

Resilient people typically have a strong sense of purpose and can visualise what success looks like. They are able to define the necessary goals and milestones which enable them to succeed, and are often adept at evaluating their progress and adjusting course as the situation demands. Another characteristic of resilient people is their ability to develop and leverage their strengths. When we take advantage of our strengths and talents on a daily basis, we are typically more energised, passionate and motivated; giving us a strong sense of purpose and direction.

Being authentic and aligning our decisions with our values is an important part of developing a sense of purpose, and allows us to remain true to ourselves when faced with even the most difficult of challenges.

RESILIENCEBUILDER TIP

Review your personal and professional goals on a regular basis and ensure that you have a plan with clearly defined milestones, to aid you in executing them. Develop your core strengths and talents, and assess whether you are leveraging them in your current role. Don't forget; our energy, passion and motivation are increased when our role is aligned with our strengths.

Think about your personal values and how they align with your company's values and ethics. If you have previously had your values challenged and were asked to 'cross the line,' how did you react? What did you do and what could you do differently in future?

Physical Stamina

In the area of Physical Stamina, your level of resilience is 80%. Good exercise, nutrition and restorative sleep are critical to improving resilience. It doesn't require becoming an athlete, it simply requires being conscious of the components our body and mind need in order to support a positive lifestyle.

The outcome of the assessment tool indicates that you have a well-developed level of Physical Stamina. Here you will find advice to help you maintain this level and develop it further:

Having a healthy lifestyle, positively impacts our ability to cope with the day-to-day stresses in our lives. A balanced diet, combined with eating at the right times and avoiding binge-eating and drinking when things get stressful, are all important factors. Regular exercise is also an excellent way to reduce stress, giving you the opportunity to take a break and potentially enjoy nature at the same time.

Having a good night's sleep is one of the key building blocks of physical stamina, as sleep is vital if we wish to repair and rejuvenate our bodies and minds. Sleep deprivation can negatively impact our performance; with increased irritability, lack of energy and lower motivation.

Managing our work/life balance is also crucial when it comes to maintaining resilience. For many, this has been challenging during the pandemic, as the line between work and home has become blurred. Finding time to rest and recharge is extremely important. Meditation, mindfulness, hobbies and walks in nature, are all examples of ways in which we can relax our bodies and minds.

RESILIENCEBUILDER TIP

Having a consistent routine is essential when it comes to maintaining your level of physical stamina. Ensure that you find time to recharge and relax, and, wherever possible, enforce a clear division between your work and home lives. As workload and pressure increase, recognise when you are slipping into the habit of working longer hours and allowing less time for yourself, as this can negatively impact your general well-being.

Emotional Intelligence

In the area of Emotional Intelligence, your level of resilience is 80%. High levels of Emotional Intelligence (EQ) enable us to recognise and manage our emotions, as well as the emotions of others. Emotions drive our behaviour and understanding how to manage them is crucial, particularly when dealing with pressure and stressful situations.

The outcome of the assessment tool indicates that you have a well-developed level of Emotional Intelligence. Here you will find advice to help you maintain this level and develop it further:

People who possess well-developed emotional intelligence typically have high levels of self-awareness and self-esteem, a clear understanding of their strengths and are able to leverage these on a daily basis. When we value ourselves, we tend to feel positive about ourselves and life in general, which aids us in coping with adversity and recovering from challenging situations. Understanding how to manage our emotions is an important factor when it comes to developing emotional intelligence. Identifying and recognising the triggers which are responsible for our stress, allows us to respond to these triggers in a more considered way and, on some occasions, mitigate against them.

Managing conflict and resolving issues before they can escalate, enables us to avoid consuming large amounts of emotional energy, which would negatively impact our ability to focus. Seeking feedback, learning from failure and not being afraid to ask for help are also important attributes in this area.

RESILIENCEBUILDER TIP

Look for opportunities to build on your strengths, explore the triggers responsible for your stress and identify mitigation strategies to help you remain calm when under pressure. Don't be too hard on yourself when things don't go to plan; focus on looking forwards, don't dwell on the past. Seek feedback from others to help guide you in your development and give feedback to others in return.

"People with well-developed emotional skills are also more likely to be content and effective in their lives, mastering the habits of mind that foster their own productivity"

- Daniel Goleman

Social Support

In the area of Social Support, your level of resilience is 80%. Having a strong social support network of family, friends and colleagues is an essential aspect of resilience. When things get tough, having people you can confide in and turn to for support is vital, as is having a mentor to help you navigate through your journey.

The outcome of the assessment tool indicates that you have a well-developed level of Social Support. Here you will find advice to help you maintain this level and develop it further:

Knowing who we can turn to for help and support – without being judged or criticised – gives us the confidence to face and overcome new challenges. People who have closer relationships with their parents and siblings are found to be more resilient. Investing time in developing these relationships, where possible, is recommended.

A mentor or coach can help you to navigate life's up and downs and provide you with emotional support and balance, either in the form of career coaching or more general life coaching.

RESILIENCEBUILDER TIP

Look for opportunities to expand your support network and strengthen existing relationships with the most important people in your life, both professionally and personally. Identify an additional mentor/coach who can lend you a fresh perspective and aid you in determining new paths ahead.

"It's not what we have in our life, but who we have in our life that counts."

- J.M. Laurence

The Stress v Performance Curve

Navigating the Curve

The stress/performance curve above illustrates the relationship between performance (vertical scale) and stress (horizontal scale). A certain level of pressure is needed to reach the 'sweet spot' of optimal performance, but prolonged pressure may lead to exhaustion.

Remaining in the exhaustion phase over a long period of time causes performance to decline, and without the chance to reset, this can lead to illness or even burnout. Illness is characterised by short periods of absence from work, whilst burnout is usually associated with extended periods of absence..

On the left side of the curve, you may feel 'bored' if the role doesn't test your capabilities. The 'challenged' phase can apply to those struggling to reach optimal performance, perhaps due to being new, unclear roles or priorities, or team conflict.

Where Are You on The Curve?

You assessed yourself as being in the 'challenged' stage.

Think about what you would need to do to get to the optimal performance level. What capabilities and skills would you need, what roadblocks would need to be removed, what clarity and support would help you get there.

Take the first step and discuss the situation openly with your manager and ask for help where required.

Stress Management Indicator (SMI) - Results

How Effective are you at Managing Stress?

Based on the answers you gave in the assessment, your Stress Management Indicator (SMI) suggests that you are **Highly Effective** at managing stress.

It's likely that you have a clear understanding of the triggers that cause stress in your life and have developed strong habits that support your well-being, even in the most challenging situations.

What to Focus On:

- **Maintain Momentum:** Continue practicing the strategies that work for you, such as regular physical activity, time management, mindfulness, or setting boundaries.
- **Stay Adaptable:** Changes at work and at home can bring new stressors. Ensure you remain flexible and open to adjusting your approaches as needed.
- **Support Others:** Consider sharing your techniques with others or mentoring those who might benefit from your insights.

Managing Stress

Our ability to manage stress is a key factor when building and sustaining resilience. Resilient individuals tend to bounce back from stressful situations more quickly, with less negative impact on their mental and physical wellbeing.

Managing stress is highly correlated with resilience. Our own research using the ResilienceBuilder Assessment Tool shows that 94% of people with high levels of resilience (Strong) were 'highly effective/effective' at managing stress.

Effective stress management involves recognising the triggers that cause stress, developing healthy coping strategies, and maintaining a balanced perspective when difficulties arise.

Techniques such as mindfulness, active problem-solving, and social support are vital tools in reducing the intensity of stress responses, thereby preventing burnout and anxiety. These methods help build resilience by promoting emotional regulation, enhancing problem-solving skills, and reinforcing a sense of control over one's environment.

In turn, resilience supports stress management by empowering individuals to approach stress with confidence, optimism, and adaptability. Resilient individuals are more likely to view stress as a manageable challenge rather than an insurmountable obstacle, which reduces their overall stress levels and enables them to recover more effectively from setbacks.

Recommended Areas for Managing Stress

Outlined below are 5 priority sub-facet areas to work on to help you manage stress and build your resilience. Check to see if these recommendations appear in the main body of the report.

Relax and Recharge - Mindfulness and Meditation

Mindfulness practices such as meditation and breathing exercises, yoga and walks in nature are highly effective in reducing stress and enhancing resilience.

Social Support

Strong support networks of family, friends and colleagues are crucial for building resilience. Social connections provide emotional support, encouragement and practical help during difficult times.

Physical Exercise

Regular physical exercise is a powerful stress reliever that boosts resilience. Exercise reduces the body's stress hormones, such as cortisol, and stimulates the production of endorphins which improve mood.

Positivity - Reframing Negative thoughts

Cognitive Behavioural Therapy (CBT) helps individuals manage stress by changing negative thought patterns and behaviours. Reframing negative thoughts helps us interpret stressful situations more positively, reducing the perception of stress and enhancing resilience.

Quality Sleep

Quality sleep is essential for managing stress and building resilience. Chronic stress often disrupts sleep, leading to a vicious cycle that exacerbates both stress and health problems. Quality sleep helps improve emotional regulation, cognitive function and stress recovery.

Your Personal Resilience Development Plan

Take time to review your Assessment Report in detail, read through the information and advice carefully then select two focus areas which you would like to prioritise. Fill in the development plan below to outline your plan of action; making your next steps concrete is crucial to getting meaningful change underway.

Development Area 1

Facet (e.g. Mental Strength)

Focus Area (e.g. Prioritisation)

Describe the challenges you face

What impact does this have on you?

Action: What are you going to do differently going forward?

What help will you need?

How will you measure success?

How will you make sure that it becomes a habit?

How will this positively impact you?

Development Area 2

Facet (e.g. Mental Strength)

Focus Area (e.g. Prioritisation)

Describe the challenges you face

What impact does this have on you?

Action: What are you going to do differently going forward?

What help will you need?

How will you measure success?

How will you make sure that it becomes a habit?

How will this positively impact you?
